

# KEY SWITCH

# DOUBLE POLE

DPDT  
Single - Gang Mortise Cylinder

## Sk-20 Keyswitch Double POle with Box.

If a keypad or proximity card reader fails to activate an electronic lock, the user can switch between normally closed (N.C.) and normally open (N.O.) contacts using the key, forcing the door to open. This acts as a backup for access control systems, so that the system does not rely on the integrity of a single device.

### Features:

- Keyed mortise cylinder (2 keys included)
- Mortise cylinder removable for ease of keying
- Flush mount with vandal-resistant screws
- DPDT Momentary switch, 5A@125VAC contact rating, color-coded wires

### Specifications:

Model
